

Everything we do is connected to our love of climbing, rocks and the outdoors. We share the same desire for beauty and perfection and the need to constantly improve our performance, equipment and ourselves. Climbing is our passion.

Quality, improved safety and cleaner design of climbing equipment represent a challenge and an opportunity for further work for us. We feel responsible toward climbers, friends and customers who rely on our products at all times, wherever they are.

We help them to reach higher and climb to the top more safely. The joy and adventures they experience when conquering vertical worlds are our biggest reward.

30 years of experience

We have already been manufacturing climbing gear in the Czech Republic for 30 years. Our company originates in Bohemian paradise - this is the place, where the beginnings of traditional sandstone climbing have their roots. And it is the sandstone climbing with its ethical clarity, respect for nature and courage that is and always will be at the heart of our values. We strive to be like the pioneers of sandstone climbing who had the courage to go in directions others considered to be surreal.

We realise that every single detail matters and therefore we are designing our products right here. We translate our visions from concepts to reality. We produce prototypes and test them in collaboration with some of the world's best climbers. Our goal is to combine vision, experience and craftsmanship. At the same time we focus on clean functional designs that serve real world purposes.

ALL-ROUND

Climb with Confidence!

More than 20 years of improving your climbing experience

1 Synthetic microfiber leather:

Elasticity and lasting shape of the shoe

Thanks to its upper synthetic microfiber, the shoe adjusts to the foot, does not stretch and maintains its original shape. The material is machine-washable.

2 No-stretch pull-on heel loops:

Easier to put on

Pull-on loops are constructed to retain their shape and this makes them easy to use when putting the shoes on.

3 Heel construction:

Comfortable...

Seamless design of the heel improves comfort in a highly exposed heel area. We were the first producer to introduce the seamless heel in 1994.

ORIGINAL
INNOVATION
1994

4 ... and perfect fit

The heels of Ocún shoes have a perfectly snug fit and the tensioned heel band helps to transfer power to the tip of climbing shoes.

5 Padded breathable tongue:

Air circulation in the upper of the shoe, more comfortable and easy to put on

The padded tongue guarantees comfort for the instep, helps to keep the shoe glued to your foot and makes putting the shoes on easier.

6 Midsoles corresponding to the shoe type:

Making the shoe stiffer, providing more support for your toes

Based on the study of human foot anatomy, we developed 3 types of midsoles (Suflex 3D, Suflex and Troniflex). We were the first company to introduce 3D sandwich construction midsole in 1999.

ORIGINAL
INNOVATION
1999

The sandwich construction midsole Suflex 3D provides toe support and helps to direct toe force vectors into one spot.

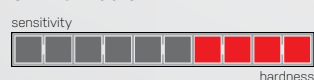

3D Fit Hard

2D Fit Hard

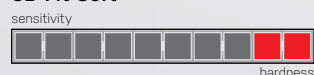

3D Fit Middle

2D Fit Middle

3D Fit Soft

2D Fit Soft

7 Durable gum-rubber outsole:

Better toe hooking

Durable gum-rubber protects the outside of the shoe and enables better distribution of power for toe hooks. The rubber surface of the shoe protects toe knuckles and prevents pain when toe hooking.

8 Insole made of natural leather:

For a hygienic feel

The formerly used natural materials of the upper shoe have been surpassed by microfibre but remain irreplaceable for the insole.

9 3-Force System:

No rotation on the foot, better stability, great support on small footholds

The patented 3-Force System used in the Ozone series shoes provides precise pressure distribution contributing to a higher torsional stiffness and resulting in perfect balance on the tiniest footholds and edges.

PATENT
PENDING
2009

10 Sole Rubber determines the shoe type

Vibram XS GRIP

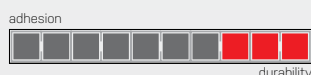

Vibram XS Grip is used for selected shoe models.

Grippin STICKY

Our top performance shoe rubber developed especially for maximum adhesion. The material has a high friction parameter which ensures excellent adhesion on ledges and slabs.

Grippin DURA

Material developed for high durability, designated for beginner's shoes and rental shops.

Because One Style Never Fits All

Climbing lab Mantra: Designing – testing – producing – listening to climbers – improving and again and again

It all begins with the last

The last is the basis of the shoe, giving it its shape, volume and character. The lasts are our Climbing Lab's „family silver.“

Multidisciplinary skills

The development of lasts is the fusion of multiple disciplines. We connect anatomy, a thorough knowledge of materials and climbing techniques and we keep following their lead.

Irreplaceable handwork

Despite all the computer support, the most important factor is still the craftsmanship and long-standing experience of our developers.

Testing: Measuring as well as sharing experience

Some physical properties can be measured; Other qualities and how the shoes feel are judged by our experienced test climbers during everyday rock climbing and bouldering.

Thanks to never-ending improvement, testing, and staying in touch with climbers, we manage to continue the development of performance climbing.

Excentric

Very down-turned last with concave shape to support of pressed toes. It has extremely asymmetric shape with orientation on two front toes. Front is anatomically modelled to allow enough comfort even for aggressive stressed toes. Width of last is for normal to wide foot with anatomical medium heel. Last was constructed for peak performance in prestressed shoes.

Shoes: Diamond

Radical

Down-turned last with radically shaped front, medium asymmetric. Front is constructed for mode-rate stressed toes with enough space for all toes. The last is suitable for normal to narrow foot with small volume heel. Last comes from study of feet of skinny, bony archetypes which frequently appear in performance climbing.

Shoes: Pearl LU

Asymmetrix

Slightly down-turned last with radically shaped front, and concave shape for support of pressed toes. Very asymmetric shape with big-toe orientation. Front is anatomically modeled for more stressed toes. Width of last is for normal to wide foot with anatomical medium heel. Last was constructed for peak performance in over-hang routes.

Shoes: Ozone, Ozone Lady, Oxi, Rebel QC, Rebel LU

Asymmetrix Plus

Slightly down-turned last with radically shaped front, and concave shape for support of pressed toes. Front is anatomically modeled for more stressed toes. Last was constructed for wide foot and for peak performance in overhang routes.

Shoes: Ozone Plus

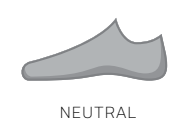

Anatomic

Slightly down-turned asymmetric last with front turned towards the big toe. The toe-box is anatomically modelled to balance high performance without compromising on comfort. The width of the insole is suitable for normal to narrow shaped feet. Due to the design and shape of the shoe, it is also suitable for women.

Shoes: Cora

Entratic

Very comfortable last designed for Beginners. Slightly asymmetric shape with features of a performance last – The big toe is oriented more to the inner edge with the anatomically shaped heel. For normal to wide foot.

Shoes: Strike QC, Strike LU, Rental

Standard

Very comfortable last designed for Beginners. Slightly asymmetric shape with features of a performance last – The big toe is oriented more to the inner edge with the anatomically shaped heel. For normal to wide foot.

Shoes: Crest QC, Crest LU, Rival

Baby

Flat last with slight asymmetry. Front is modeled for comfort of all toes while keeping technicality of shoes on high level. Width of last as well as heel correspond with orthopedic requirements of children shoes.

Shoes: Hero

Choosing the right size

Simple system for choosing a rough size

Ocún shoes are manufactured using a last sized on a metric scale according to the foot length in millimeters (so called Mondo Point). You can easily measure that size, consider your performance level and subsequently find out the rough shoe size.

Factors to consider when choosing the exact size

In order to choose the exact size, you need to consider several factors:

1. Everybody's foot is unique in terms of shape, volume, width and shape of toes.
2. The shoes differ according to the shape of

the last, construction of the upper and closures, which affect the fit and feel of the shoe.

3. The size also depends on the difficulty of climbing routes the climber intends to use the shoes for.

Always try on and test the shoe in order to choose the right size.

ADULTS

1. Measure foot-length

2. Choose how tight it should be according to performance

Extreme Fit

Performance Fit

Comfort Fit

3. Look up your size in adult conversion chart

mm	210	215	220	225	230	235	240	245	250	255	260	265	270	275	280	285	290	295	300	305	310	315	320	325

children's sizing

women's sizing

men's sizing

extended sizing

KIDS SIZES

1. Measure foot-length

2. Adjust the measured length according to performance

Performance Fit

Comfort Fit

3. Look up size in children's conversion chart

mm	172	178	184	190	196	202	208	214	220
EUR	27	28	29	30	31	32	33	34	35

Ocún climbing shoes for kids are sized using a French sizing scale corresponding to foot length in millimeters. To size the child's shoes correctly, measure the length of their foot and add between 10 and 16 millimetres depending on if a performance or comfort fit is required. Then look up the right size in the conversion chart.

Always try on and test the shoe in order to choose the right size.

Closure systems

Lace-UP (LU)

The classic lace-up system enables fine tuning of the fitting for performance climbers or for those, who have not a typical foot shape.

Quick Lace-UP (LU)

Quick lace-up enables to tighten the shoes by a single pull.

Quick Closure (QC)

Simple and practical closure system using Velcro strips makes putting on/taking off easy.

Slipper (S)

Easy to slip on due to it's elasticated rubber construction and single velcro strap. The velcro strap also holds the foot perfectly in place.

Diamond

Shoes

HIGH-END

Timeless weapon for conquering the most demanding climbs and boulder problems

The Diamond is a down-turned and aggressive shoe designed for high performance and competition climbing.

The Diamond is designed to climb the most difficult sport routes. It is extremely effective on even the smallest of footholds and the most difficult overhangs where a perfect fit is essential. The asymmetric lacing system allows the fit to be fine tuned. The Diamond uses natural leather to deliver exceptional comfort. Performance is maximised by the extremely "sticky" Vibram XS Grip sole.

 **NEW**

PERFORMANCE

Performance climbing shoe for a wide range of rock activities

Sport climbing, bouldering or indoor training. Oxi QC is a shoe for the versatile climber to compete in all disciplines. Highly rubberised toe-box and slingshot rand give you the ability to perform technical toe-hooks and heel-hooks on any surface.

The two piece tongue with two velcro straps in opposing directions make the QC easy to put on and hold the foot firmly in place.

Highly asymmetric and aggressive curvature working in combination with the medium hard mid-sole and sticky sole makes this shoe suitable for all types of modern sport climbing.

 **NEW**

PERFORMANCE

Versatile lace-up performance shoe

Harder than any other shoe in the Oxi series, this shoe is suitable for high performance in all climbing disciplines.

The highly rubberised toe-box and slingshot rand protect the shoe in crags while holding the foot in place for the more technical foot moves. The hard midsole allows for greater stability on even the smallest of footholds and edges. The laces make for a highly adjustable fitting and hold the foot firmly in place without compromising the shoes' capability.

The Oxi LU comes with two sets of laces as there are two ways to set up the lacing on the shoe, one for training and the other for serious sport climbing.

PERFORMANCE

Performance bouldering shoe in a slipper style

Ideal tool for bouldering at even the highest level. We have worked closely with Ocún ambassador Alban Levier in the construction of this shoe and the improvements we have made have been added to the entire range of Oxi shoes.

This product is an updated version of the shoe following feedback from World Cup experience. A more sensitive mid-sole with added stability in the toe-box protects the joints and increases friction.

This shoe has the most rubberised toe-box of the whole Oxi series, which, along with the slingshot rand assist in technical toe-hooks and heel-hooks on even the smallest edges and holds. The slipper construction with a single velcro strap means the shoe is easy to take on and off but the performance is not compromised.

UPPER: Microfiber	MIDSOLE: 3D Fit Soft

PERFORMANCE

Legendary high performance shoes for narrow feet

Pearl is a time-tested high-performance shoe with radical arching and slight asymmetry. Tomas Mrazek won two World lead climbing championships and won the overall World Cup wearing the Pearl LU. The special shape of the shoe ensures the right combination of firmness and sensitivity. Fitted with "Grippin Sticky" rubber on the sole these shoes give excellent friction and support on overhangs, thin edges and on slabs. Comfort is ensured by the fast and easy LU closure system, a padded tongue and a raised heel.

1 The waist belt divides into two reinforced strands:

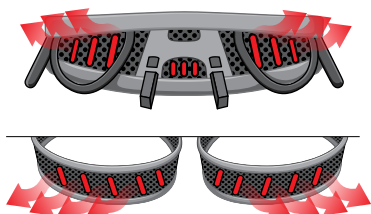

Improved pressure distribution and added comfort

The construction of the harness distributes the pressure affecting the climber's body evenly into the whole of the waist belt and leg loops, increasing comfort during long routes.

2 Breathable padding:

High breathability with maximum comfort

The belt is designed to use the space between the two reinforced strands for ventilation holes which are covered by perforated lining for added comfort.

Water repellent PE foam padding:

Softness and dimensional stability throughout the whole life span

The properties of the foam guarantee appropriate softness and dimensional stability. The padding is water repellent, maintains its qualities, and does not deteriorate as a result of being used, or when exposed to temperature differences or humidity.

3 Perforated microfiber lining:

Durability and easy maintenance

The lining material, also used in car seats, is exceptionally comfortable, durable and easy to maintain. The perforation guarantees good ventilation.

Slide-lock buckles:

To buckle and tighten up quickly and safely

With slide-lock buckles there is no need to check the correct position of the strap in the buckle. All you need to do to tighten the belt is to pull the tail of the strap.

4 The system of connection of loop legs with the waist belt:

Safer tie-in

Non-detachable connections provide extra safety and reduce the risk of wrong tie-in.

Anatomical shape:

Comfortable in every situation

The shape of the harness accommodates body geometry as well as reducing pressure when belaying, abseiling and especially during falls.

EGO 3

Art. 02476

Comfortable lightweight 3-buckle sport climbing harness

3-buckle harness from the competition and sport climbing EGO range. High comfort is provided by the quality breathable sandwich and a waist belt divided into two strands. The design of the ventilation holes provides increased breathability. The materials and design of the padding gives you a soft-to-touch feel.

- Waist and legs padded with breathable sandwich
- Safety joint system
- Adjustable leg loops
- 3 slide-lock stainless steel buckles (2× 15 mm, 1× 20 mm)
- 4 gear loops

Harnesses WeBee

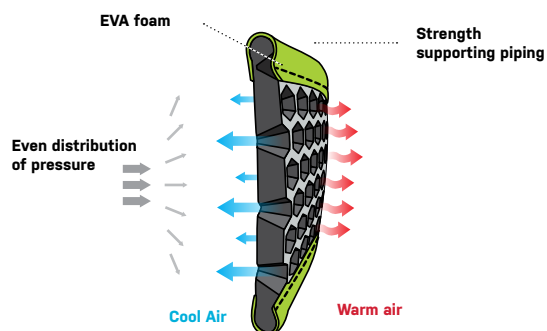

WeBee Performance Technology:

Lightweight, breathable, flexible and durable

Thanks to the patented construction of the padding, this harness has an adjustable shape, distributes pressure evenly and is extremely breathable while keeping its light weight.

PATENT
PENDING
2013

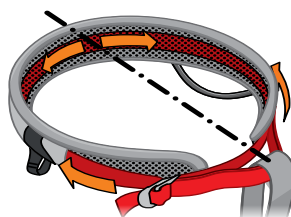

The sandwich structured waist belt made of perforated 3D PE EVA foam with a closed-cell structure is abrasion resistant and washable. The harness is unique because of its water and sweat resistant one-layer construction without any additional lining or cover layers.

Movable waist system:

The waist padding and the belay loop always stay centered. Added comfort and safety.

ORIGINAL
INVENTION
2001

The waist belt goes through a drawstring-like channel in the padding so the padding can be adjusted precisely to face the belay loop. Gear loops are placed symmetrically on left and right side.

Systém posuvného pasu:

Universal size

The movable waist system provides a larger sizing range.

Slide-lock buckles:

To buckle and tighten up quickly and safely

With slide-lock buckles there is no need to check the correct position of the strap in the buckle. All you need to do to tighten the belt is to pull the tail of the strap.

The system of connection of loop legs with the waist belt:

Safer tie-in

Non-detachable connections provide extra safety and reduce the risk of wrong tie-in.

Anatomical shape:

Comfortable in every situation

The shape of the harness accommodates body geometry as well as reducing pressure when belaying, abseiling and especially during falls.

WeBee 1

Art. 03152

Light 1-buckle sport climbing harness

Basic harness providing comfort, lightweight breathability and durability of the WeBee concept. Anatomical padding.

WeBee Quattro

Art. 03210

Comfortable, 4-buckle harness for technical and bigwall climbing

Webee Quattro is one of the most comfortable harnesses, and is suitable for multi-pitch and alpine climbing. The wide anatomical waist belt and leg loops as well as the Webee technology provide increased comfort. Thanks to the technology used, this harness is very light weight while maintaining a high level of comfort and a whole range of features.

- Adjustable leg loops with wider padding
- Safety joint system
- 4 slide-lock stainless steel buckles (2× 20 mm, 2× 30 mm)
- Haul bag loop on the back
- 7 gear loops
- 2 belay / tie-in loops
- 2 carrytool slots

Ultimate 9,4

Ultimate lightweight sport climbing rope, aimed to the hardest sport climbs

During its development were implemented top climbers' experiences and latest dynamic rope production technologies. To impregnate, there is used Teflon® fibre protector technology, which creates protecting shell on the whole surface of the rope, increasing the resistance of the sheath and the core.

Full Circle of

CONDOR

An HMS carabiner responding to the new trend of safety. The carabiner is equipped with an independent internal wire gate which prevents the carabiner from rotating, and guards against unwanted release from a belay loop – internal gate locks in the right direction – it prevents upward release. When using Condor, climbers can focus their full attention on belaying safely.

New generation ergonomic body is forged for a comfortable and secure grip.

„Rope Friendly“ shape of the carabiner top is tuned for operating the rope reliably in order to avoid its excessive wear.

EAGLE

A modern, light-weight HMS carabiner for belaying with a UIAA knot or to be used with belay devices.

The ergonomic design enables easy locking. The shape was designed with the intention to balance weight, strength and size.

The profile of the upper part enables reliable and safe manipulation with the rope.

OSPREY

Hot-forged carabiner of an oval shape suitable for technical bigwall climbing, invaluable on working with pulleys.

The utility value of this carabiner is increased by Ocún's typical rope friendly shape of the upper profile, which makes the Osprey usable for HMS belaying in case of an emergency. If climbers owned just one carabiner, it should be the Osprey.

Ocún Carabiners

KESTREL

A series of mini carabiners with comparable solidity to the large ones. It is suitable for belaying and for ultra-light quickdraw sets for competitive and performance climbers. Its optimized profile, calculated by Ocún's developers, doesn't lose solidity despite its „flyweight.“

HAWK

A series of carabiners with a popular asymmetric small-sized body for belaying. A compromise between weight and solidity.

Due to its optimum dimension the carabiner is suitable for competitive and performance climbing. That is why this series has both lock versions (Straight and Wire) for combined quickdraw sets.

FALCON

A series of carabiners of typical dimensions for belaying. Popular mainly for traditional belaying, especially on sandstone. Suitable for those who prefer strength and maximum reliability to low weight. That is why this series has a screw lock version.

The body is fitted with indentations for higher security during manipulation.

Condor HMS

Modern, ergonomically comfortable „big“ indoor HMS carabiner with internal wire gate for safe belaying and rappelling

K-lock.

Kestrel – Pack 60
Art. 02994

- 60 pieces in the package
- 6 colors evenly represented

Ferry

Versatile belay and rappel device

Art. 02692

WEIGHT:

84 g

RECOMMENDED FOR:

9–11 mm

7,8–9,5 mm (double ropes)

- Descending with one or two climbers
- Single or double rope
- 2 friction modes
- Rappelling
- Lowering
- Self-locking belay of the second climber at a stand (belay point)
- Possibility to lower a second climber from a stand (belay point)
- Color: red, green, blue

Hurry

Ultra-light belay and rappel device

Art. 03277

WEIGHT:

43 g

RECOMMENDED FOR:

9–11 mm

7,8–9,5 mm (double ropes)

- Descending with one or two climbers
- Single or double rope
- 2 friction modes
- Rappelling
- Lowering
- Color: red, green, blue

Belay Set Condor Hurry

Art. 03276

WEIGHT:

128 g

RECOMMENDED FOR:

9–11 mm

7,8–9,5 mm (double ropes)

- Combination of the safestscrew lock carabiner with the lightest and simplest belay and rappel device
- Ideal assistant even for beginners
- Color: red

Belay Set Eagle Ferry

Art. 03013

WEIGHT:

154 g

RECOMMENDED FOR:

9–11 mm

7,8–9,5 mm (double ropes)

- Combination of the most versatile models for belaying and rappelling
- Ideal for rock and mountain climbing
- Color: red, green, blue

Belay Set Eagle Hurry

Art. 03297

WEIGHT:

113 g

RECOMMENDED FOR:

9–11 mm

7,8–9,5 mm (double ropes)

- Combination of universal HMS carabiner and the lightest belay and rappel device
- Color: red, green, blue

Falcon QD Zoom PAD

The best choice for "red point" climbing and training

Paddy Sitcase

Art. 03551

Quality sit-starter 3 in 1 size

A compact multipurpose crash pad designed primarily for problems with sit-starts.

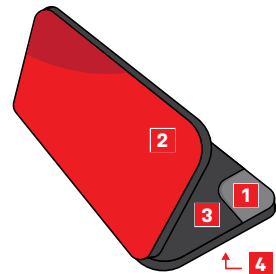

The Case can be configured three different ways. It can be used closed, open length ways and open width ways. Once open it can be used as an additional crash pad, a play area for children or even a bed. When closed up it can store bouldering equipment, handy for moving between boulders.

Made from top quality materials, including YKK zippers, and will last a very long time.

- Sit-starter or additional pad 3 in one size
- The Case also works as a transport bag fitting in everything you need for a day bouldering
- 2 rubber handles
- 1 carrying shoulder strap
- Quality YKK zippers
- It is possible to insert the Sitcase inside Incubator, Dominator, Moonwalk and Sundance, making it easy to transport when walking to the crag and between problems

Men’s technical pants for daily wear and climbing

The Honk are the ideal climbing pants for colder periods of the year. They are made from a very durable material with some stretch. The ergonomic design allows unrestricted climbing performance. Heavy weight, breathable and comfortable to the touch. The final „RETRO work look“ is accented by seams stitched with strong thread. Exposed spots are secured by colored bartack seams.

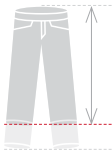

WEIGHT (SIZE L):	MATERIAL:
650 g	95% Cotton
	5% Elastane

SIZES:
S-M-L-XL-XXL
these colors variants:

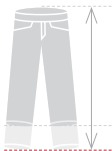

NEW

SIZES WITH SHORTER LEGS:
S-short, M-short, L-short, XL-short, XXL-short
color variant:

-5 cm

- All sizes in the chart are in centimeters.
- Size designation of clothes correspond to the dimensions of the body according to the size of the table.
- We recommend trying out clothes personally, the basic dimensions of sizes are only indicative.
- Construction dimensions of finished garments also take into account the nature of the item of clothing and the potential elasticity of the fabric used.
